

TVENNA

A. <https://arasaac.org/pictograms/search> - myndir sem henta vel

ATHUGIÐ að stundum kemur svartur rammi utan um myndirnar þegar þær eru færðar yfir á <http://aaronbarker.net/spot-it/spot-it.html> og því er best að breyta bakgrunnslitnum strax (áður en smellt er á ) og er það gert svona:

B. <http://aaronbarker.net/spot-it/spot-it.html> - heimasíða þar sem hægt er að búa til tvennu á auðveldan hátt.

1. Búðu til möppu í tölvunni með myndum sem þú ætlar að nota. Það kemur best út að hafa myndirnar ferningslaga.

Það verður að vera **ákveðinn fjöldi** mynda - annars kemur þetta ekki rétt út:

3 myndir = 2 myndir á hverju spjaldi

7 myndir = 3 myndir á hverju spjaldi

13 myndir = 4 myndir á hverju spjaldi

31 mynd = 6 myndir á hverju spjaldi (ég notaði þetta)

57 myndir = 8 myndir á hverju spjaldi

Myndirnar komnar í möppu (31 mynd)

2. Dragðu myndirnar úr File Explorer yfir í rammann fyrir neðan „Provide data“

Make your own Spot It clone

Make your own [Spot it](#) game with your own words or images. All the card logic taken from a blog post from [Radigan Engineering](#).

Provide data

[Show instructions on how to provide data](#)

Locally stored images

These are the images we are storing locally for you. You can [remove them all](#) or only certain ones by clicking them below. Any you remove will no longer be available for showing in a game. If you have any saved games, the images referenced there that you delete will stop broken.

Items marked in green are used in the current set. Click an image to add it to the current set, click it again to remove it. Click "Delete" to remove it all together.

[Add all locally stored images to game](#) [Remove all locally stored images from game](#) [Delete all images](#)

3. Veldu útlit spjaldanna – eftirfarandi stillingar miða við hringlaga spjöld með 6 myndum á hverju spjaldi (31 mynd)

Make your own Spot It clone

Make your own [Spot it](#) game with your own words or images. All the card logic taken from a blog post from [Radigan Engineering](#).

Display Options

Set print size: [3x5 \(landscape\)](#) [5x3 \(portrait\)](#) [4x6 \(landscape\)](#) [6x4 \(portrait\)](#) [3.5x3.5 \(square/circle\)](#)

Items per row: [2](#) [3](#) [4](#)

Show labels: ☐ Yes

Randomly rotate items: ☐ Yes

Big text (for site words): ☐ Yes

Colorize words (for site words): ☐ Yes

[Show print instructions](#)

Play Spot It Game

You can also play a game here online to see how fast you can get 10 matches. Click the item on either card that is the match.

[Start game](#)

Þegar búið er að breyta stillingunum ([litað gult](#) hér fyrir ofan) ætti þetta að líta svona út:

Make your own Spot It clone

Make your own [Spot it](#) game with your own words or images. All the card logic taken from a blog post from [Radigan Engineering](#).

Display Options

Set print size: [3x5 \(landscape\)](#) [5x3 \(portrait\)](#) [4x6 \(landscape\)](#) [6x4 \(portrait\)](#) [3.5x3.5 \(square/circle\)](#)

5. Næsta skref er mismunandi eftir því hvaða vafri er notaður. Á hverri A4 síðu eiga að vera 6 spjöld.

Í **Google Chrome** birtast 6 spjöld á einni síðu og þar þarf ekki að breyta neinum stillingum.

Þar er líka hægt að vista skjalið sem .pdf sem er mikill kostur.

Destination	Svart_duplex on kop-p Svart_duplex on kop-print01 Save as PDF See more...
Pages	
Copies	1
Layout	Portrait
Color	Black and white

Í **Microsoft Edge** þarf t.d. að breyta Margins úr Normal í Narrow því annars birtast bara 2 spjöld á hverri síðu.
